1- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF S-ADENOSYL-L-METHIONINE-DEPENDENT METHYL TRANSFERASE REACTIONS; THEREFORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE CONTROL OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR CONTENTRATION OF ADENOSYLHOMOCYSTEINE.

Michalowski C.B., Bohnert H.J.;
Submitted (NOV-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF
S-ADENOSYL-L-METHININE-DEFENDENT METHYL TRANSFERASE REACTIONS;
THEREFORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE
CONTRADIOUS WETHYLATIONS VIA REGULATION OF THE INTRACELLULAR
CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-homocysteine + H(2)0 = adenosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mesembryanthemum crystallinum (Common ice plant).

-!- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF
-!- FUNCTION: ADENOSYLHOMOCYSTEINE BRATHYL TRANSFERASE REACTIONS;
S-ADENOSYL-1-METHIONINE-DEPENDENT METHYL ARY FOLE IN THE
THEREPORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE
CONTROL OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR
CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).
-!- CATALXTIC ACTIVITY: S-adenosyl-L-homocysteine + H(2)O = adenosine

1. Biol. Chem. 269,16364-16370(1994).

1. FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF S-ADENOSYL-L-WETHIONINE-DEPENDENT METHYL TRANSFERASE REACTIONS; THEREFORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE COMPROL OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).

1. CATALYTIC ACTIVITY: S-adenosyl-L-homocysteine + H(2)0 = adenosine

adenosylhomocysteinse (EC 3.3.1.1) - wheat
NyAlternate names: S-adenosyl-L-homocysteine hydrolase
C;Species: Triticum aestivum (common wheat)
C;Date: 23-Apr-1999 #sequence_revision 23-Apr-1999 #text_change 23-Jul-1999
C;Accession: T06764
R;Richeards, K.D.; Gardner, R.C.
submitted to the EMBL Data Library, March 1993
A;Description: The influence of aluminium on histone, heat shock and S-adenosyl-L-hom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Cross-references: EMBL: L11872; NID: 9170772; PIDN: AAA34303.1; PID: 9170773

adenosylhomocysteinase (EC 3.3.1.1) - Madagascar periwinkle
N.Alternate names: S-adenosyl-L-homocysteine hydrolase
S.Species: Catharanthus roseus (Madagascar periwinkle)
C.Species: Catharanthus roseus (Madagascar periwinkle)
C.Species: Catharanthus roseus (Madagascar periwinkle)
C.Accession: S38379
S.Schroeder, G.; Waltz, A.; Hotze, M.; Schroeder, J.
Submitted to the EMBL Data Library, October 1993
A.Description: CDNA for stress-induced S-adenosyl-L-homocysteine hydrolase from Madag A.Reference number: S38379
A.Accession: S38379
A.Molecule type: DNA
A.Residues: 1-485 <SCH>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Cross-references: EMBL:Z26881; NID:g407411; PIDN:CAA81527.1; PID:g407412 C;Genetics:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A Description: catalyzes the reversible hydrolysis of S-adenosyl-L-homocysteine to adence (Syberfamily: adenosylhomocysteinase (Skeywords: NAD); thioether hydrolase F;258-287/Region: beta-alpha-beta NAD nucleotide-binding fold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               д
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_documentation_block:

adenosylhomocysteinase (EC 3.3.1.1) - malaria parasite (Plasmodium falciparum)

N;Alternate names: S-adenosyl-L-homocysteine hydrolase
C;Species: Plasmodium falciparum
C;Date: 02-Aug-1994 #sequence_revision 04-Oct-1996 #text_change 09-Jun-2000
C;Accession: A54040
C;Accession: A54040
J; Biol: Chem. 269, 16364-16370, 1994
A;Title: Plasmodium falciparum S-adenosylhomocysteine hydrolase. CDNA identification, A A;Efter connaber: A54040; MUID:94266832
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Cross-references: GB:U07365; NID:9537431; PIDN:AAA21391.1; PID:9460639

```

This invention describes a novel polypeptide (PP) of somatic proteins extract (I) which have tuberculostatic activity. (I) or their subsequence has at least one of the following properties: (a) the PP induces an in vitro response, during primary infection with virulent Mycobacterium, determined by a release of interferon (TFN)-gamma, (b) PP induces a protective immunity, determined by vaccinating an animal with PP and an adjuvant, three times at two weeks intervals, (c) PP induces an in vitro response, or in vitro recall response, determined by release of IFN-gamma of at least 1000 pg/ml or 500 pg/ml, respectively, from Peripheral Blood Mononuclear Cells (PBMC) withdrawn from TB patients, or PPD positive individuals, 6 months after diagnosis, (d) PP induces a specific antibody response in a TB patient, as determined by enzyme linked immunosorbent assay (ELISA) technique or a western blot, (e) PP induces a positive delayed type hypersensitivity (DTH) response, determined by intradermal injection. (I) and (II) are to seful in preparing a prophylactic or therapeutic medicine as a vaccine for induction of a protective or generation of an immune response in a mamumal against infection with a virulent Mycobacterium infection with a virulent Mycobacterium infection. The vaccine of the invention induces efficient immunological memory, providing long term protection against TB. This sequence represents a Microbacterium tuberculosis TB54 antigen

```
The protein sequence was deduced from the DNA sequence of a clone obtd. by screening a cultured epithelial axis cDNA library with probes from cultured and untreated mRNA. The clone obtd. expressed its protein only at floral differentiation. The gene can be introduced into other plants or can be suppressed by an antisense technique for the control of flowering of plants.
                                                                                                                                                                                                                                                                                                    Gene expressing at floral differentiation for flowering control obtd. from culture of floral axis epithelium cells of Nicotiana tabacum, for introduction into other plants
